About the Company

- ▶ Myntra is a one stop shop for all your fashion and lifestyle needs.
- ▶ One of India's largest e-commerce store for fashion and lifestyle products.

Problem Statement

- You are working at Myntra, a leading online fashion retailer.
- The management has asked you to analyze a dataset of various apparel items to gain insights into pricing, discounts, ratings, and available sizes.
- The Data Analysis was done based on only 10,000 rows to avoid any system lag and create smooth calculations.

Our Goals

The approach to complete the project will be as follows:

#1 Data Cleaning and Preparation

#2 Data Analysis

#3 Data Retrieval and Lookup

Raw Dataset

The raw dataset provided to us is below

Index	URL	Product_id	BrandName	Category	Individual_category_1	Description	DiscountPrice	OriginalPrice	DiscountOffer	SizeOptions	Ratings	Reviews
1	https://www.zeel.com/2296012	Roadster	Bottom Wear	jeans	Men	roadster men jeans	824	1499	45% OFF	28, 30, 32, 34	3.9	999
2	https://www.zeel.com/13780156	LOCOMOTIVE	Bottom Wear	track-pant	Men	locomotive men track pant	517	1149	55% OFF	S, M, L, XL	4.0	999

#1 Data Cleaning and Preparation

Project Questions

- 1) Check for duplicate values in your dataset and remove them.
- 2) Standardize the "DiscountOffer" column to a single format, ensuring all values are uniform.
- 3) Identify rows where both "DiscountPrice" and "DiscountOffer" are null and fill the "DiscountPrice" with the average discount price of the respective category.
- 4) Replace all null values in the "SizeOption" column with the text "Not Available."

Approach

1) Check for duplicate values in your dataset and remove them.

To remove duplicates we go to

- Data Menu > Remove Duplicates
- Unselect All and then choose Product_id to remove duplicates based on Product_id.
- We found no duplicates.

Category	category_by_Gender	Description	DiscountPrice (in)	Size	Offer	Tags
Women	Women	mast harbour women yellow solid tank				
Men	Men	highlander men	599			
Women	Women	mayra pink embroidered a line pure cot				
Women	Women	roadster women				
Men	Men	herenow men				
Men	Men	hrx by hrithik				
Men	Men	roadster men				
Women	Women	anubhutee wo				
Women	Women	athena women				
Women	Women	roadster women maroon solid round ne				
Men	Men	highlander men	516			
Women	Women	vishudh women	696			

Approach

2) Standardize the "DiscountOffer" column to a single format, ensuring all values are uniform.

To standardize the “DiscountOffer” column to a single format

- We first replace all the values from DiscountOffer Column which contain ‘Rs.’ with empty value with help of **SUBSTITUTE()** formula.
- In the same formula we **TRIM()** the final result to remove all the whitespaces which will be present.

	L	M	N	O	P	Q	R
	Ratings	Reviews	Column1				
34,	3.9	999	=TRIM(SUBSTITUTE([@DiscountOffer],"Rs.",""))				
	4	999 5	TRIM(text)				
44,	4.3	999 55% OFF					
XX	4.2	999 31% OFF					
XL	4.2	999 35% OFF					
XL	4.4	999 40% OFF					
36	3.9	998 60% OFF					
	3.7	998 58% OFF					
XL	4.3	997					
34,	3.5	996					
XX	4.4	996 55% OFF					

Approach

2) Standardize the "DiscountOffer" column to a single format, ensuring all values are uniform.

- We then calculate the **DiscountAmount** by using the formula(which we can see in the next to picture) where in we extract the values before the % symbol and divide it by 100 and multiply the whole by the original price.

N	O	P	Q	R
Column1	DiscountAmount			
45% OFF	=IF(ISNUMBER(SEARCH("%",[@Column1]),(LEFT([@Column1],SEARCH("%",[@Column1])-1)/100)*[@[OriginalPrice (in Rs)]],[@Column1])			
55% OFF				
55% OFF				
31% OFF				
35% OFF				
40% OFF	239.6			
60% OFF	899.4			
58% OFF	809.1			
55% OFF	1484.45			

- By using Text to Columns tool, we remove the **OFF** word from the DiscountAmount by setting delimiter to **space**.

Approach

- 2) Standardize the "DiscountOffer" column to a single format, ensuring all values are uniform.

- Further we calculate the **Discount(%)** by dividing the DiscountAmount with OriginaPrice and multiplying the result by 100.

O	P	Q	R	S	T
DiscountAmount	Column1				
674.55	=IF([@DiscountAmount]=""","",[@DiscountAmount]/[@[OriginalPrice (in Rs)]]*100)				
631.95					
769.45					
401.45	31				
209.65	35				
239.6	40				
899.4	60				
809.1	58				
1484.45	55				
2379.3	70				

Approach

3) Identify rows where both "DiscountPrice" and "DiscountOffer" are null and fill the "DiscountPrice" with the average discount price of the respective category.

To check if values are null and replace them with the average

- We use the **IF()** formula to check for null values.
- If we find any null values we replace them with the Average values based on the category of the Product from a particular Brand.
- To do this we use **AVERAGEIFS()** formula.
- From this we obtain the final column with all the **DiscountOffer(%)** values.
- Now we can find all the remaining values such as **DiscountedAmount** and **DiscountAmount**.

O	P	Q	R	S	T
DiscountAmount	Discount(%)	Column2			
674.55	45	=IF([@Discount(%)]="","",AVERAGEIFS(
631.95	55	[Discount(%)], [Category],[@Category])			
769.45	55	[@Discount(%)])			
401.45	31				
209.65	35		35		
239.6	40			40	
899.4	60			60	
809.1	58	IF(logical_test, [value_if_true], [value_if_false])			
			47.72562		
			43.97481		
1484.45	55			55	
				44.61667	
2379.3	70			70	

Approach

To find the DiscountAmount and DiscountedAmount

- We divide the DiscountOffer by 100 and multiply the result by the OriginalPrice.
- We can then find the DiscountedAmount by subtracting the DiscountAmount from the OriginalPrice.
- We can use **FLOOR.MATH()** function to round off the result.

P	Q
DiscountAmount	DiscountedAmount
674.55	=FLOOR.MATH(
631.95	[@OriginalPrice (in Rs)
769.45]-[@DiscountAmount])

O	P	Q	R	S
Column2	DiscountOffer2	DiscountAma		
674.55	45	=[@DiscountOffer2]/100*		
631.95	55	[@OriginalPrice (in Rs)]		
769.45	55			
401.45	31	401.45		
209.65	35	209.65		
239.6	40	239.6		
899.4	60	899.4		
809.1	58	809.1		
	53	581.94		
	52	1429.48		

Approach

4) Replace all null values in the "SizeOption" column with the text "Not Available."

To replace null values we

- Check if the value is empty in Size Option by using an **IF** formula.
- If the value is empty we replace it with "**Not Available**" and if it's not we keep the same value as earlier.

SizeOption	Ratings	Reviews	Column
28, 30, 32, 34	3.9	999	=IF([@SizeOption]","", "Not Available",[@SizeOption])
S, M, L, XL	4	999	
38, 40, 42, 44	4.3	999	
S, M, L, XL, XX	4.2	999	S, M, L, XL, XXL
XS, S, M, L, XL	4.2	999	XS, S, M, L, XL
XS, S, M, L, XL	4.4	999	XS, S, M, L, XL
30, 32, 34, 36	3.9	998	30, 32, 34, 36
S, M, L, XL	3.7	998	S, M, L, XL
XS, S, M, L, XL	4.3	997	XS, S, M, L, XL
28, 30, 32, 34	3.5	996	28, 30, 32, 34, 36
S, M, L, XL, XX	4.4	996	S, M, L, XL, XXL
XS, S, M, L, XL	4.1	996	XS, S, M, L, XL, XXL, 3XL, 4XL

Cleaned Dataset

Thus we can say our Data Cleaning and Preparation Process is finished and we obtain the cleaned dataset ([Link to Cleaned Dataset](#))

The screenshot shows a Microsoft Excel spreadsheet titled "Myntra Fashion Clothing 2 - Excel". The ribbon menu is visible at the top, with the "Data" tab selected. The main content area displays a table with 19 rows of data, representing a cleaned dataset. The columns are labeled A through N and include fields such as URL, Product_id, BrandName, Category, Individual_category, category_by_Gender, Description, OriginalPrice (in Rs), DiscountAmount, DiscountedAmount, DiscountOffer(%), SizeOption, Rating, and Review.

1	A	B	C	D	E	F	G	H	I	J	K	L	M	N

#2 Data Analysis

Project Questions

- 1) Calculate the overall average original price for products with ratings greater than 4.
- 2) Count the number of products with a discount offer greater than 50% OFF.
- 3) Count the number of products available in size "M."
- 4) Create a new column to label the products as "High Discount" if the discount offer is greater than 50% OFF, otherwise label them as "Low Discount."

Approach

- 1) Calculate the overall average original price for products with ratings greater than 4.

To calculate the overall average original price for products with ratings greater than 4 we use the following formula

```
=AVERAGEIFS(Table2[OriginalPrice (in Rs)],Table2[Ratings],">4")
```

We get the result as:

Product ID	Original Price (in Rs)	Ratings
1	6	3
2	3	2
3	4	4
4	5	5
5	3	3
6	4	4
7	5	5
8	4	4
9	5	4
10	4	4

Approach

- 2) Count the number of products with a discount offer greater than 50% OFF.

To count the number of products with a discount offer greater than 50% OFF we use the following formula

```
=COUNTIF(Table3[DiscountOffer], ">50")
```

We get the result as:

Approach

3) Count the number of products available in size "M."

To count the number of products available in size “M”

- We select the SizeOption column and then from the Filter tool we can choose **Text Filters> Contains** and type “M” in the value box and click OK.
- We will be displayed with all the products with size “M” available.
- In the Status Bar we will get the count of the number of products available in size “M”.

We get the result as:

- We can also use the formula below to obtain the same result

=COUNTIFS(Table1[SizeOption], "*M*")

Approach

4) Create a new column to label the products as "High Discount" if the discount offer is greater than 50% OFF, otherwise label them as "Low Discount."

To create the High/Low Discount column

- We can use the IF() formula to check if the DiscountOffer is above 50 or below and assign **High Discount** or **Low Discount**.

We get the result as:

N	O	P	Q
DiscountOffer	High/Low		
45	=IF([@DiscountOffer]>50,"High		
55	Discount","Low Discount")		
55	High Discount		
31	Low Discount		
35	Low Discount		
40	Low Discount		
60	High Discount		
58	High Discount		

Final Table

#3 Data Retrieval and Lookup

Project Questions

- 1) Use VLOOKUP/XLOOKUP to find the product brand, price, and rating of the product with Product_id "11226634".
- 2) Find the "DiscountPrice" for the product with the Product ID "6744434" using the INDEX and MATCH functions.
- 3) Utilize nested xlookup to find any column's detail of a product with it's product id.

Approach

- 1) Use VLOOKUP/XLOOKUP to find the product brand, price, and rating of the product with Product_id "11226634".

To find the product brand, price, and rating of the product with Product_id “11226634”

- We make use of the following formulas

product brand $=VLOOKUP(S15,Table1[[Product_id]:[High/Low Discount]],2,0)$

price $=VLOOKUP(S15,Table1[[Product_id]:[High/Low Discount]],7,0)$

rating $=VLOOKUP(S15,Table1[[Product_id]:[High/Low Discount]],12,0)$

We get the result as:

product brand	LOCOMOTIVE
price	1149
rating	4

Approach

2) Find the "DiscountPrice" for the product with the Product ID "6744434" using the INDEX and MATCH functions.

To find the "DiscountPrice" for the product with the Product ID "6744434" using the INDEX and MATCH functions

DiscountPrice =INDEX(Table1[DiscountAmount],MATCH(S25,Table1[Product_id],0))

We get the result as:

DiscountPrice	899.4
---------------	-------

Approach

- 3) Utilize nested xlookup to find any column's detail of a product with it's product id.

The said task couldn't be completed because of the restrictions of Excel 2019.
